Application No.

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

- 1. (Original) A finger unit comprising: a finger root part, a fingertip part, and a joint part for linking the finger root part and the fingertip part; wherein the joint part supports the fingertip part revolvably around a joint axial line that is orthogonal to a center axis of the fingertip part; the finger root part comprises a joint driving actuator for revolving the fingertip part around the joint axial line; and the fingertip part comprises a revolving member that is supported in a revolvable state by the joint part, a rotating member that is supported in a state of rotation around the center axis of the fingertip part by the revolving member, and a rotation drive actuator for rotating the rotating member, wherein the rotation drive actuator is supported by the revolving member.
- 2. (Original) The finger unit according to claim 1, wherein the joint part comprises a strain gauge or other torque sensor for sensing torque transmitted via the joint part.
- 3. (Original) The finger unit according to claim 1, wherein the finger root part comprises a mounting flange and the joint driving actuator mounted on the mounting flange; and the joint part comprises a drive-side bevel gear that is coaxially fixed in place at a distal end of a rotation output axle of the joint driving actuator, a

pair of bearing housings that extend from a front surface of the mounting flange

through both sides of the drive-side bevel gear and protrude forward, bearings that

are mounted in the bearing housings, a joint axle that is rotatably supported at both

ends by the bearings and that is aligned in a direction orthogonal to the center axis

of the rotation output axle of the joint driving actuator, a driven-side bevel gear that is

coaxially fixed in place to the joint axle and that is meshed with the drive-side bevel

gear, and a linking member that is fixed in place at one end to the joint axle and that

extends in a direction orthogonal to the joint axle; wherein the revolving member of

the fingertip part is linked to the linking member.

4. (Original) The multi-joint finger unit according to claim 3, wherein

the joint axle is a hollow joint axle comprising a hollow part for wiring.

5. (Currently Amended) The finger unit according to claims 1

through 4 claim 1, wherein the rotating member of the fingertip unit is a cylindrical

outer casing of the fingertip part.

6. (Currently Amended) The finger unit according to any of claims 1

through 4 claim 1, wherein a drill, driver bit, or other operating tool is coaxially

mounted on the rotating member of the fingertip part.

7. (Original) A multi-joint finger unit comprising: a finger root part, a

finger intermediate part, a fingertip part, a finger-root-side joint part for linking the

finger root part and the finger intermediate part, and a fingertip-side joint part for

linking the finger intermediate part and the fingertip part; wherein the finger-root-side

joint part supports the finger intermediate part revolvably around a joint axial line that

is orthogonal to a center axis of the finger intermediate part; the finger root part

comprises a finger-root-side joint driving actuator for revolving the finger intermediate

part around the joint axial line; the fingertip-side joint part supports the fingertip part

revolvably around a joint axial line that is orthogonal to a center axis of the fingertip

part; the finger intermediate part comprises a fingertip-side joint driving actuator for

revolving the fingertip part around the joint axial line; and the fingertip part comprises

a revolving member that is supported in a revolvable state by the fingertip-side joint

part, a rotating member that is supported in a state of rotation around the center axis

of the fingertip part by the revolving member, and a rotation drive actuator for

rotating the rotating member, wherein the rotation drive actuator is mounted on the

revolving member.

8. (Original) The multi-joint finger unit according to claim 7, wherein

the fingertip-side joint part and the finger-root-side joint part comprise a strain gauge

or other torque sensor for sensing the torque transmitted via these joint parts.

9. (Original) The multi-joint finger unit according to claim 8, wherein

the finger intermediate part comprises a plurality of finger intermediate portions and

an intermediate joint part that links together the finger intermediate parts; the

intermediate joint part supports the intermediate portion nearest to the fingertip in a

revolvable state around a joint axial line that is orthogonal to a center axis of the

intermediate portion; and the intermediate portion nearest to the finger root

comprises an intermediate joint driving actuator for revolving the intermediate portion

nearest to the fingertip around the joint axial line.

10. (Original) The multi-joint finger unit according to claim 9, wherein the

intermediate joint part comprises a strain gauge or other torque sensor for sensing

the torque transmitted via the intermediate joint part.

11. (Original) The multi-joint finger unit according to claim 7, wherein

the finger root part comprises a mounting flange and a finger-root-side joint driving

actuator mounted on this mounting flange; and the finger-root-side joint part

comprises a drive-side bevel gear that is coaxially fixed in place at a distal end of a

rotation output axle of the finger-root-side joint driving actuator, a pair of bearing

housings that extend from the front surface of the mounting flange through both

sides of the drive-side bevel gear and protrude forward, bearings that are mounted in

the bearing housings, a joint axle that is rotatably supported at both ends by the

bearings and that is aligned in a direction orthogonal to the center axis of the rotation

output axle of the finger-root-side joint driving actuator, a driven-side bevel gear that

is coaxially fixed in place to the outer peripheral surface of the joint axle and that is

meshed with the drive-side bevel gear, and a linking member that is fixed in place at

one end to the joint axle and that extends in a direction orthogonal to the joint axle;

wherein the revolving member of the intermediate part is linked to the linking

member.

12. (Original) The multi-joint finger unit according to claim 11, wherein

Attorney's Docket No. 1030673-000211

Application No.

Page 6

the joint axle is a hollow joint axle comprising a hollow part for wiring.

13. (Original) The multi-joint finger unit according to claim 7, wherein

the fingertip-side joint part comprises: a drive-side bevel gear that is coaxially fixed in

place at a distal end of a rotation output axle of the fingertip-side joint driving

actuator that protrudes from the finger intermediate part towards the fingertip; a pair

of bearing housings that are linked to the revolving member of the finger

intermediate part and that extend through both sides of the drive-side bevel gear and

protrude forward; bearings that are mounted in the bearing housings; a joint axle that

is rotatably supported at both ends by the bearings and that is aligned in a direction

orthogonal to the center axis of the rotation output axle of the fingertip-side joint

driving actuator; a driven-side bevel gear that is coaxially fixed in place to the outer

peripheral surface of the joint axle and that is meshed with the drive-side bevel gear;

and a linking member that is fixed in place at one end to the joint axle and that

extends in a direction orthogonal to the joint axle; wherein the revolving member of

the fingertip part is linked to the linking member.

14. (Original) The multi-joint finger unit according to claim 13, wherein

the joint axle is a hollow joint axle comprising a hollow part for wiring.

15. (Currently Amended) The multi-joint finger unit according to ef

elaims 7 through 14 claim 7, wherein the rotating member of the fingertip part is a

cylindrical outer casing of the fingertip part.

Attorney's Docket No. 1030673-000211 Application No. Page 7

- 16. (Currently Amended) The multi-joint finger unit according to any of claims 7 through 14 claim 7, wherein a drill, driver bit, or other operating tool is coaxially mounted on the rotating member of the fingertip part.
- 17. (Currently Amended) A multi-finger grasping mechanism having a plurality of finger units, wherein each of the finger units is the finger unit according to any of claims 1 through 6 claim 1.
- 18. (Currently Amended) A multi-finger grasping mechanism having a plurality of multi-joint finger units, wherein each of the multi-joint finger units is the multi-joint finger unit according to any of claims 7 through 16 claim 7.
- 19. (Original) The multi-finger grasping mechanism according to claim 18, comprising: at least three of the multi-joint finger units; and a common finger unit mounting plate on which the multi-joint finger units are supported.
